Application/Control Number: 10/586,866

Art Unit: 3753

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Hewitt (4,287,912). Hewitt shows a flow control valve with flow port 13 below valve chamber 24, check ball 16, rod chamber 16, adjusting rod 45, and port 42. The adjusting rod is movable to form a gap or seal against the valve.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Ise (4,495,965). Ise (Fig. 3) shows inlet 5', a valve chamber holding spring biased check valve 13, a rod chamber holding adjusting rod 15, and outlet 9a. The adjusting rod has a flow passage within, and when moved, adjusts a throttle gap formed between its leading edge portion and a peripheral wall of the valve chamber. The Fig. 2 and 4 embodiments are also seen as anticipatory.

Claims 6-7 are rejected under 35 U.S.C. 102(b) as being anticipated by JP 39-18634 or JP 11347869. Each of the references at least one flow control valve mounted in a barrel portion which is screwed into a mounting hole of a hydraulic cylinder.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 10/586,866

Art Unit: 3753

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ise (4,495,965) in view of JP 39-18634 or JP 11347869. It would have been obvious to mount the Ise valve in either of the Japanese cylinders because the Ise valve is provided for the same purpose, and installing it directly in a cylinder would have provided a more compact assembly.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gehrke and Schmoeger show a similar valves, where an adjusting rod is threaded into a cylinder and carries a spring biased check valve.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Hepperle whose telephone number is 571-272-4913. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Huson can be reached on 571-272-4887. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
